

**We believe the future of
our environment could depend
on a single plant.**

It's a plant called FutureGen — the world's first near-zero emissions power plant. And E.ON U.S., the parent company of LG&E and KU, is part of an alliance that's helping to build it. The result will be reliable energy with a drastic reduction in carbon dioxide emissions. Because at E.ON U.S., we believe we can all work for a better tomorrow, today. Find out how you can help at www.eon-us.com.
